MILLION DOLLAR LIGHT

Whole "million dollar light" corpus, or shade if you want, is made of ground money. This concept was made to ask important questions about design, mainly about the price of design. Although it's not directly crossing the high prices of these products, it's important to think about it. Also, an idea of real values is hidden in there. What if we put price tag of 1 million Czech crowns. It's only the value of material. Of course, the money is ground, therefore worthless, but the nominal value was once pretty high. If you think about real values in life, we guess money won't be on first place.

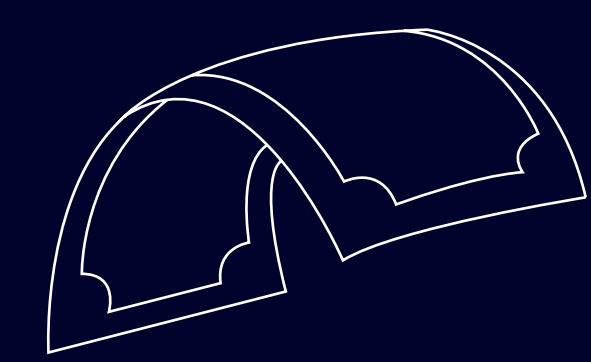

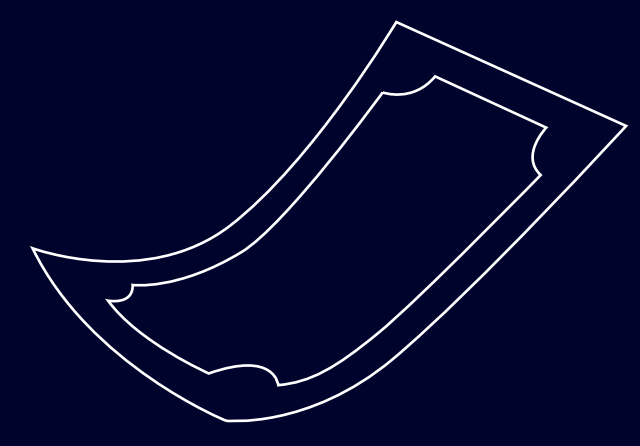

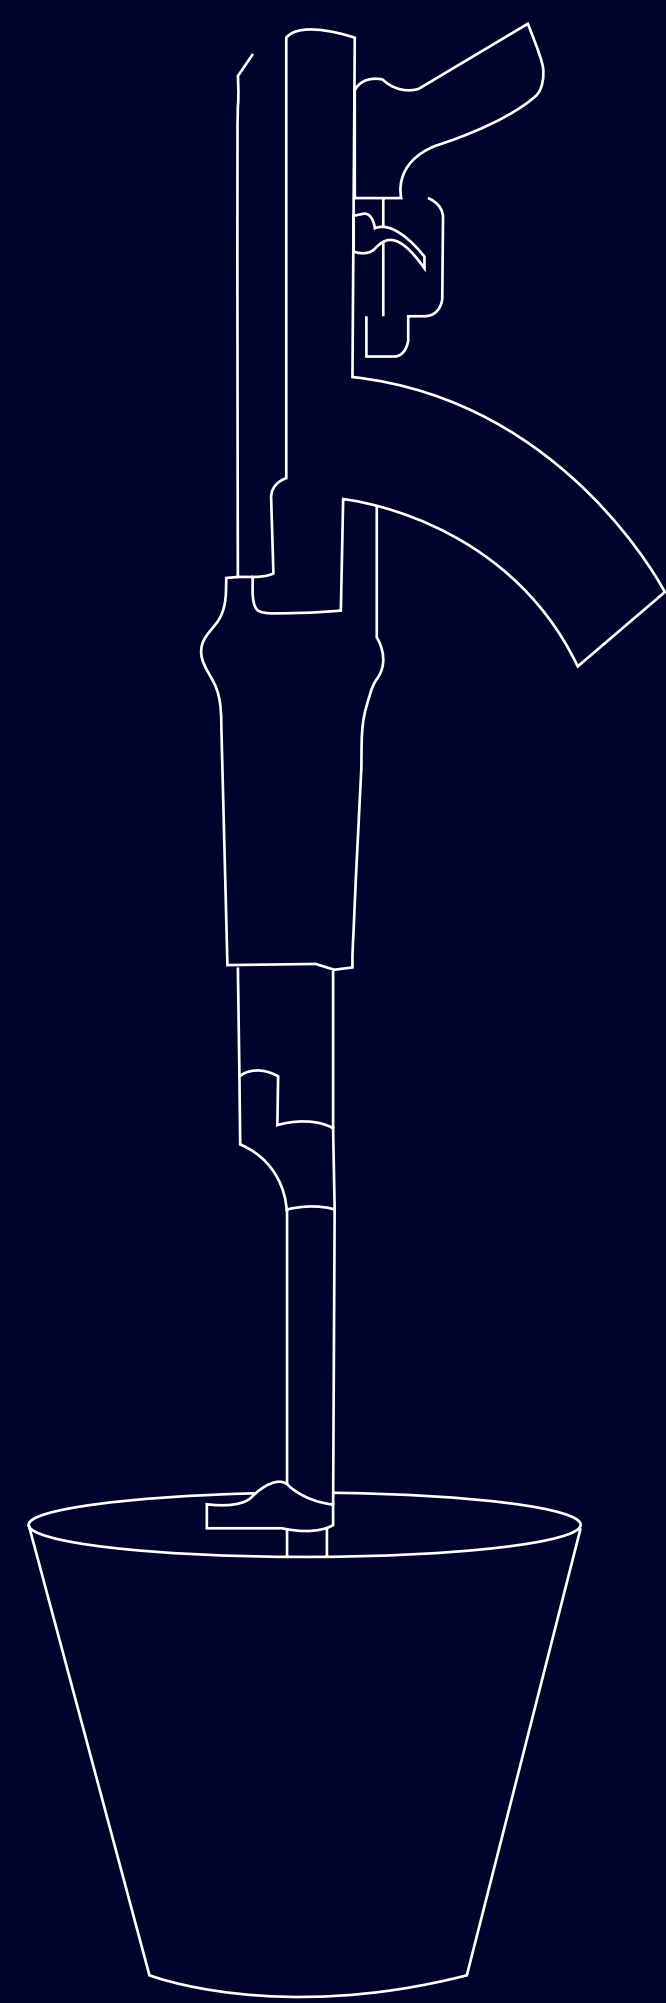

HOW IT WAS MADE
