

Winter Term

presentation of Aneta Sládková

1

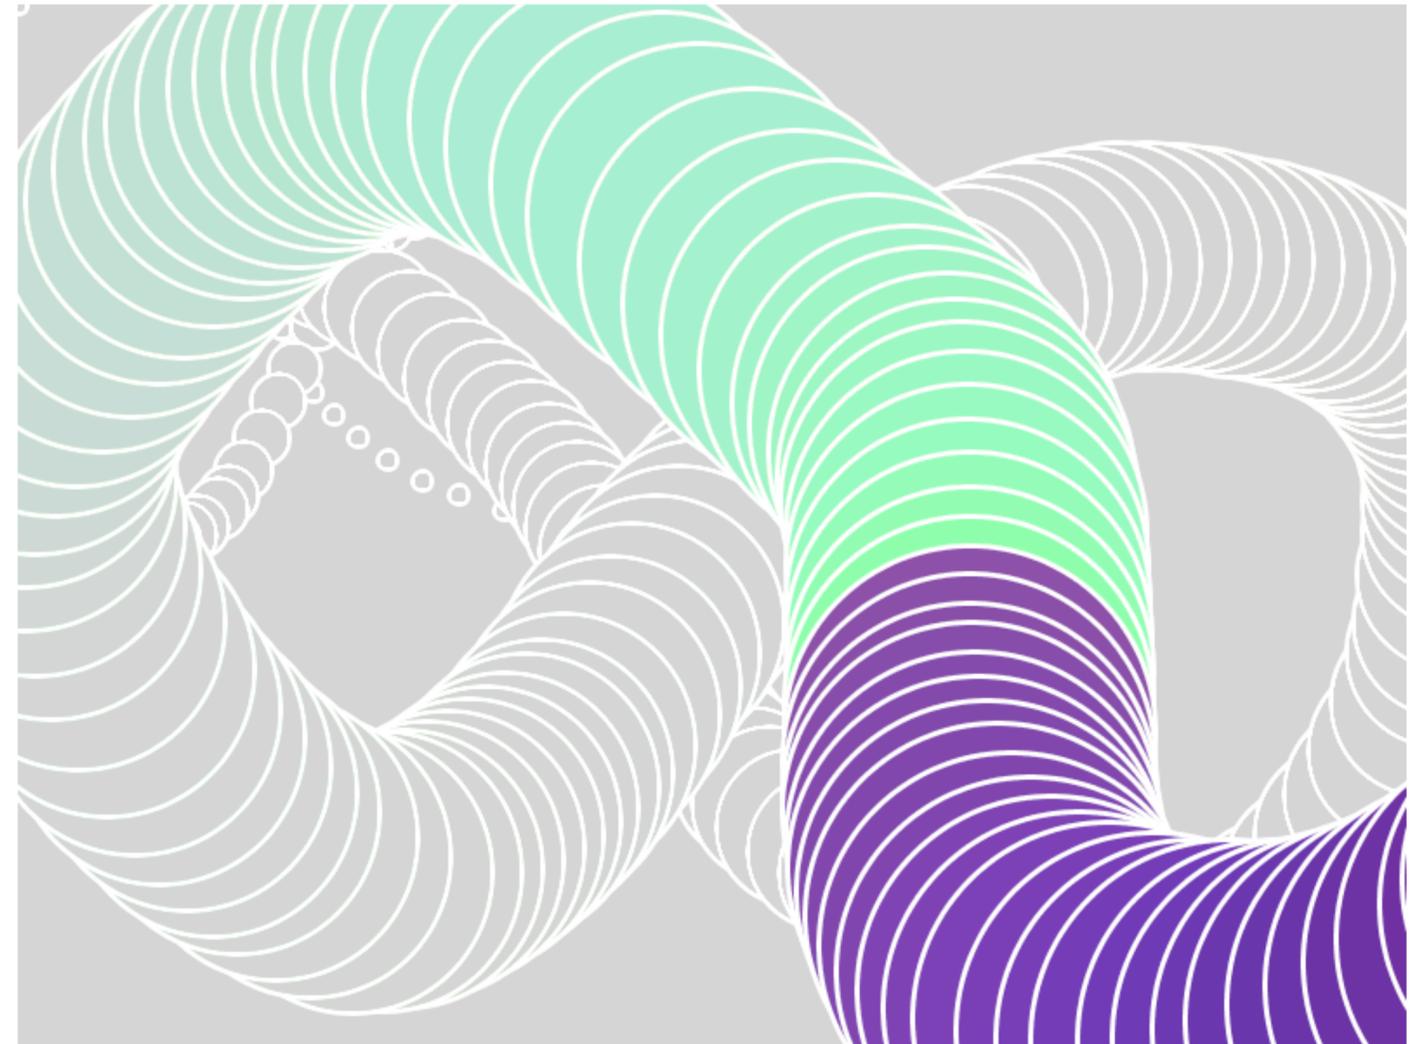

Optional task

Main goal — Learn something new
Playing around with Processing and After Effects

Goals

- Actually do something in After Effects
- Discover world of creative coding in Processing
- Have fun

Result [here](#)

2 Chaos

Deconstructing, deforming and decomposing my own works
using Processing

Idea

Every single project that I've been working on came up from chaos. I decided to reverse the process by taking my final images and make them look chaotic again.

1. Create sound reactive programme with Processing and deform the images — not as planned
2. Controll the deformation by mouse movement — not as planned
3. Use a code and let it do what it does, generate — sort of

Sound reactive

Make sound using Korg Kaossilator. Deform an image by sound waves. Simple.

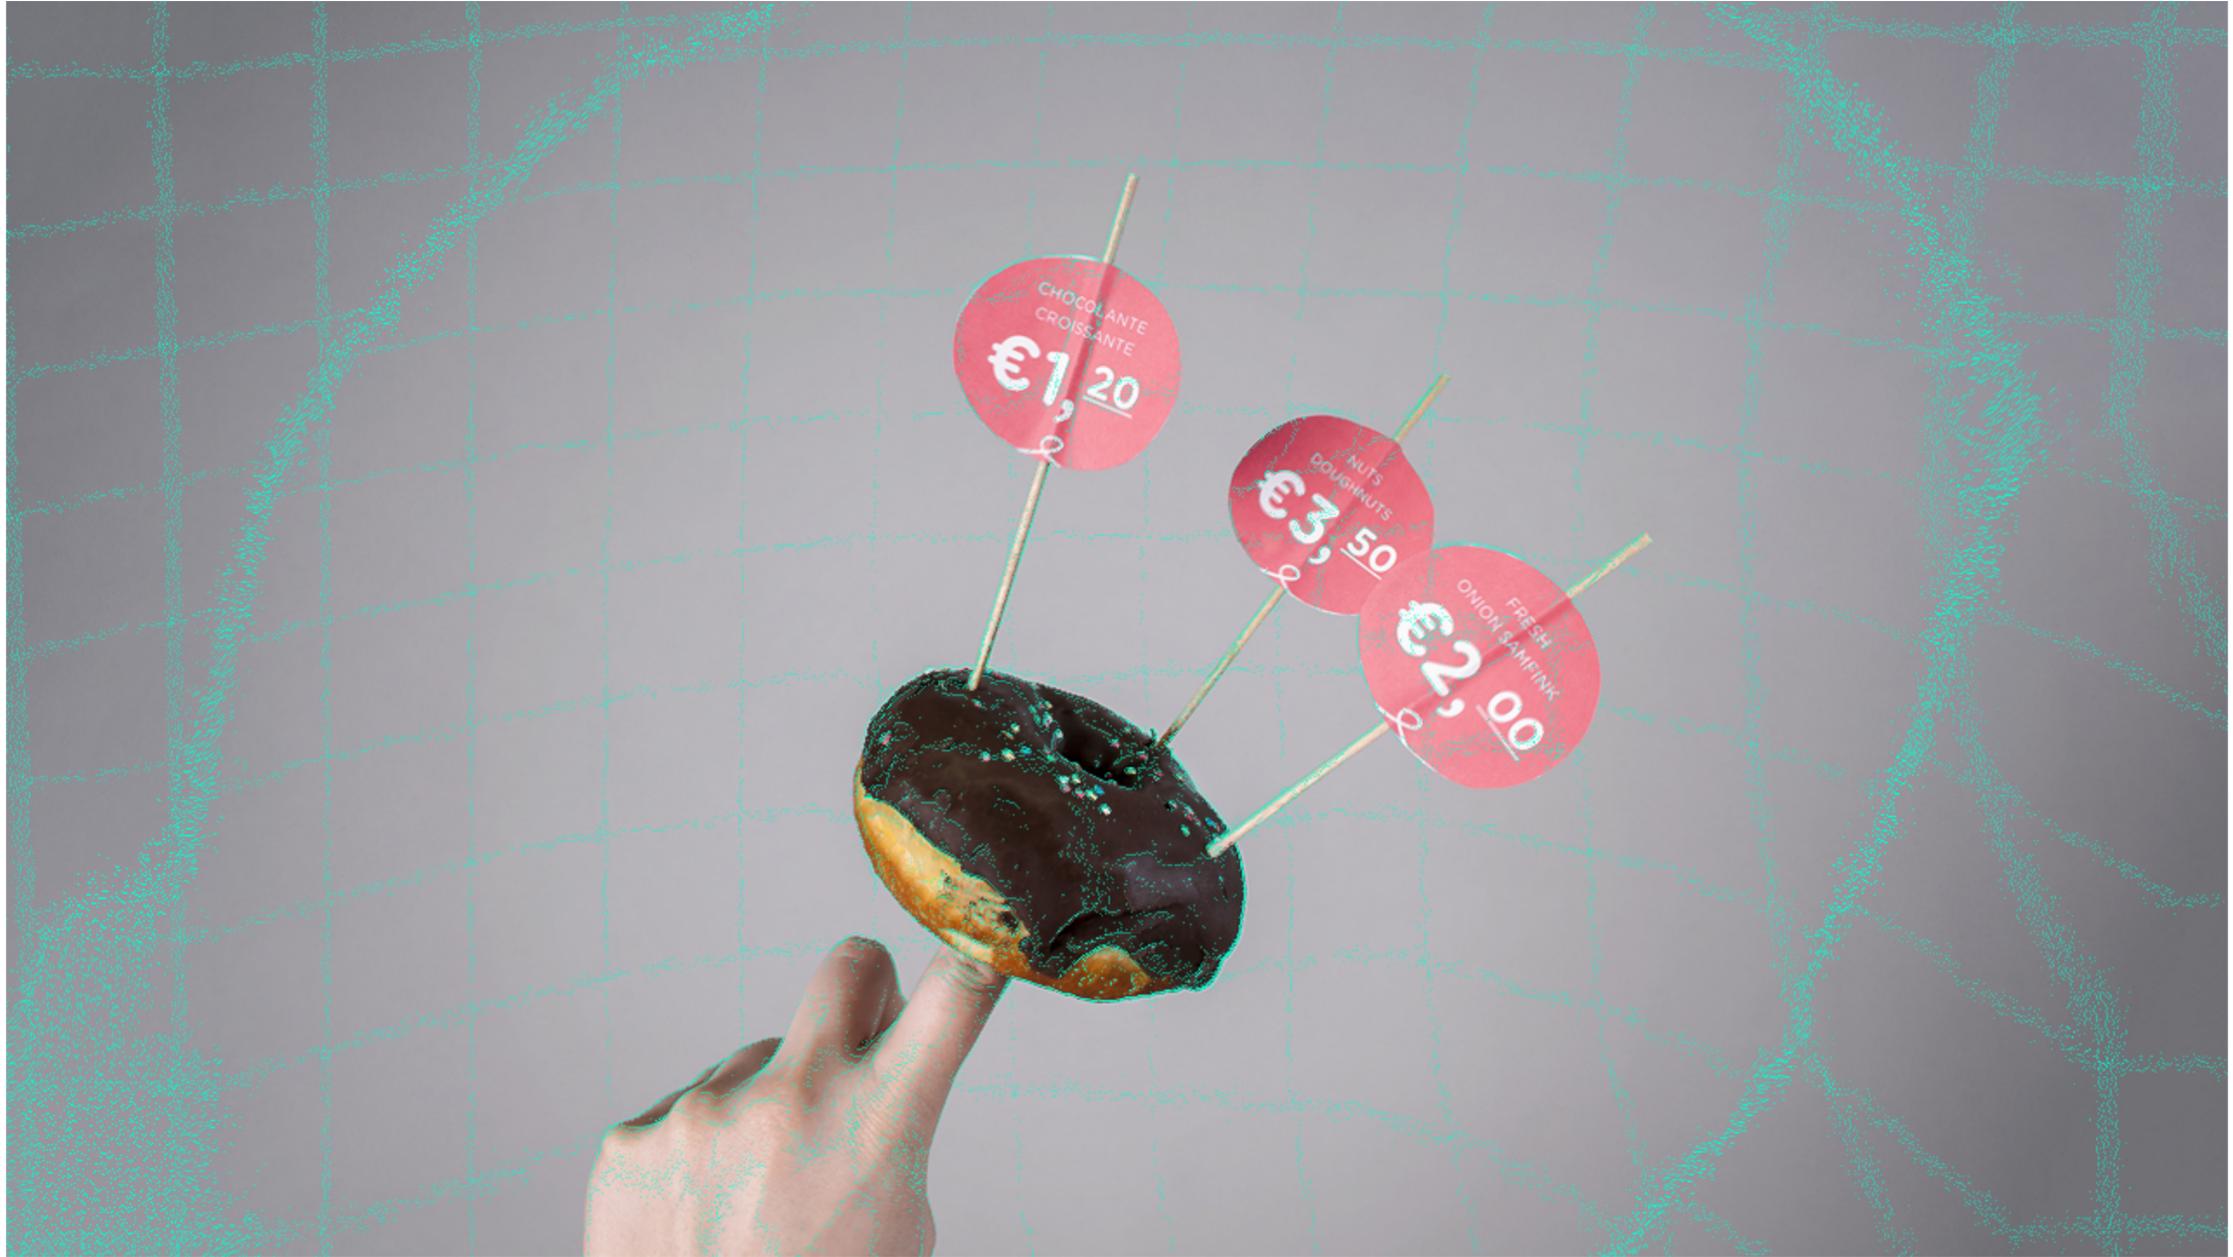

Well...

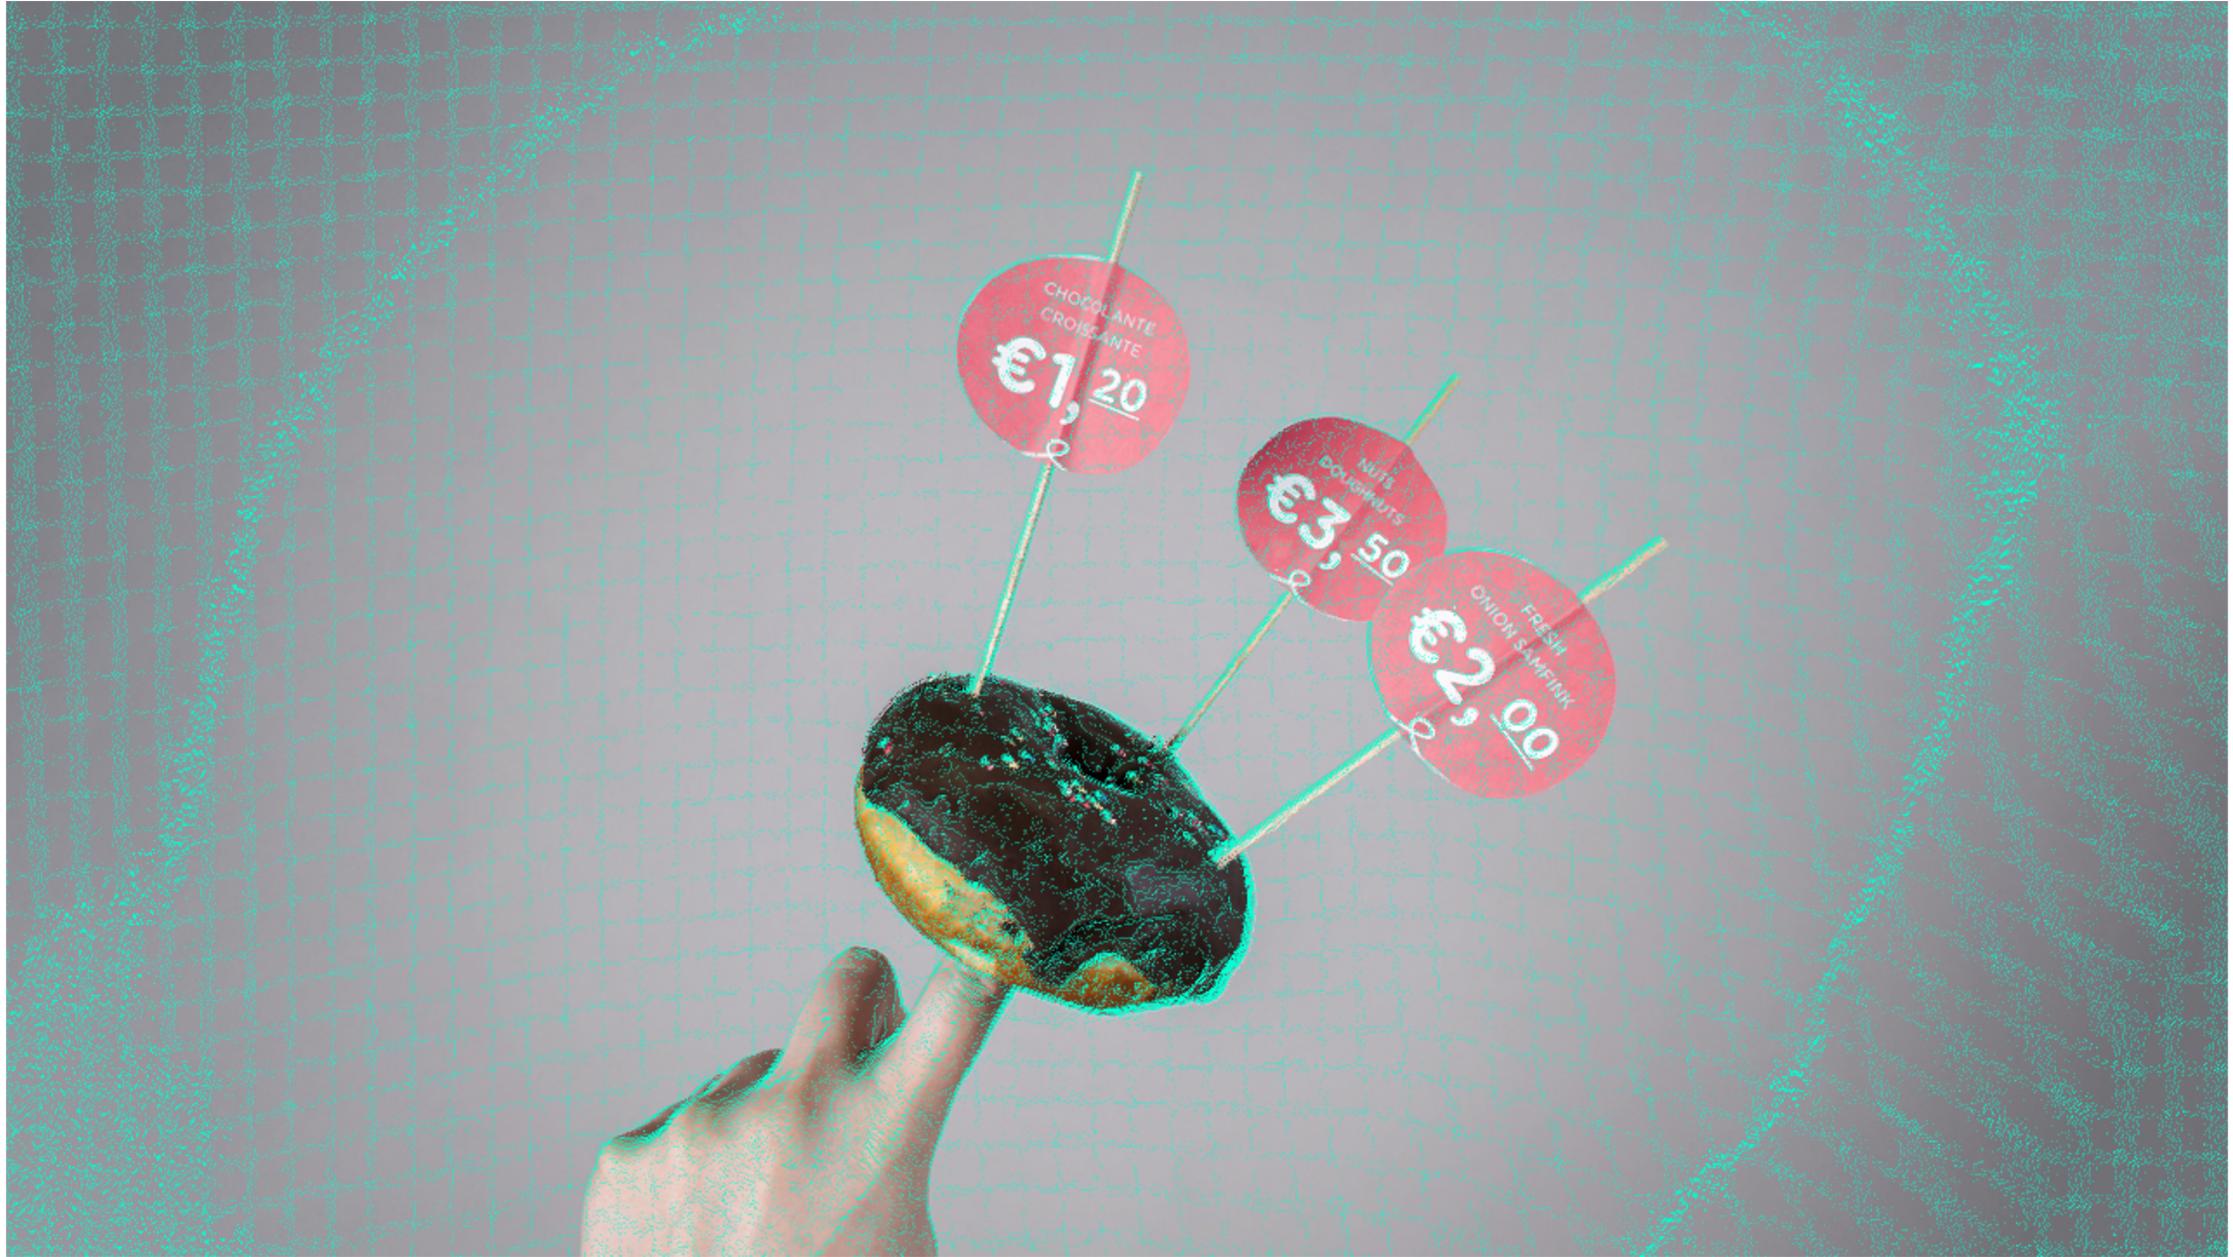

It is way harder than I thought.

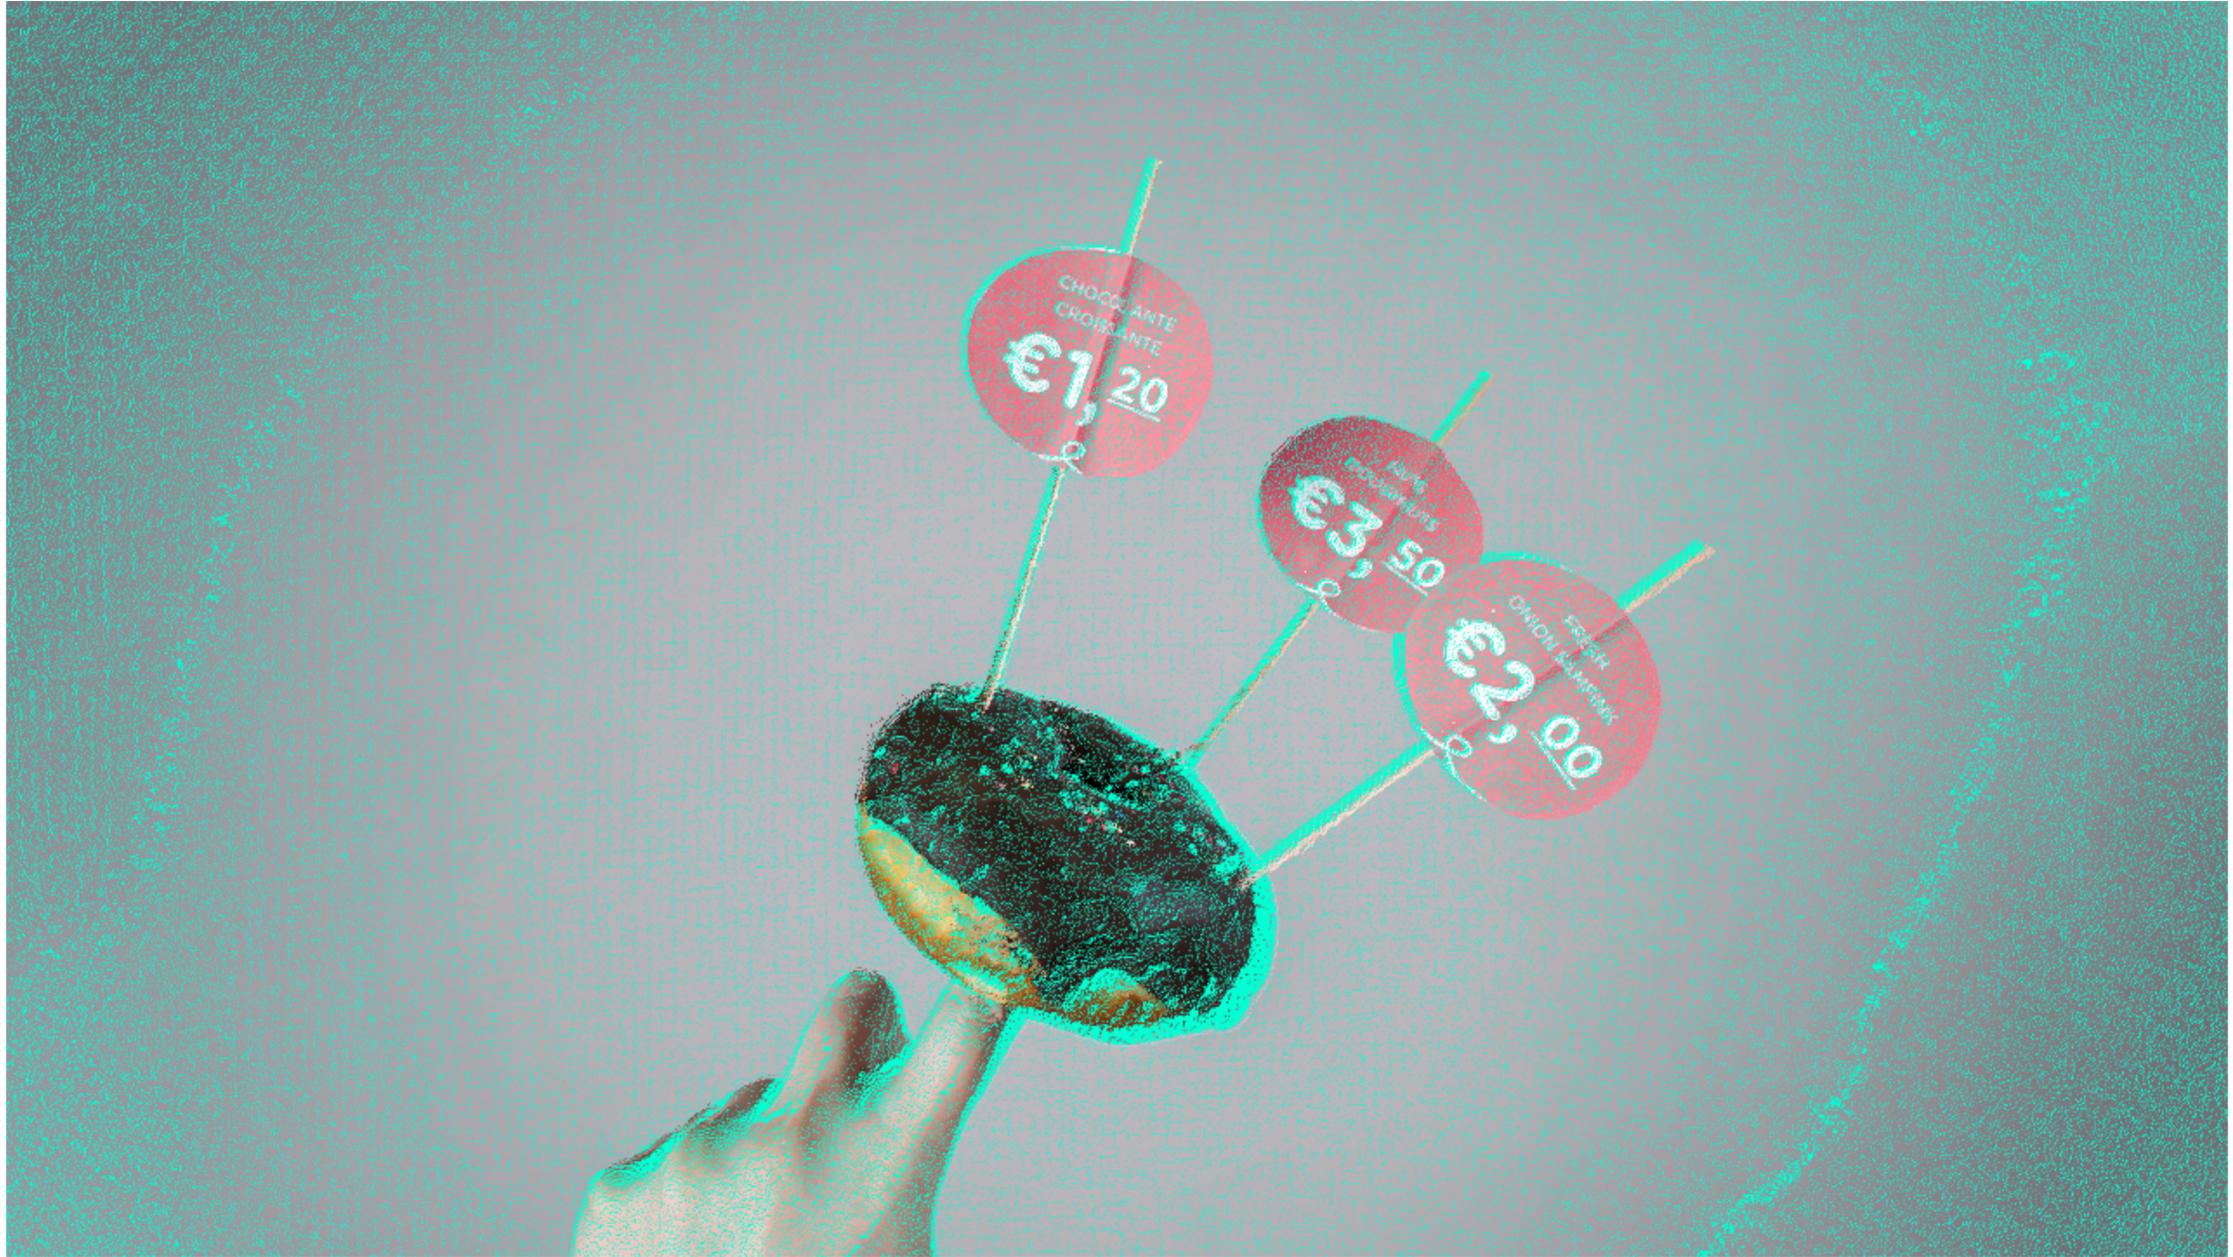

Mouse control

Online newscast

Conceptual website project called True Story

Idea

None. At first.

1. Research, questionnaire, questions > problem discovery > ideas > more questions
2. Choose one less stupid
3. Think it through and make it look good
